# PROBLEM STATEMENT

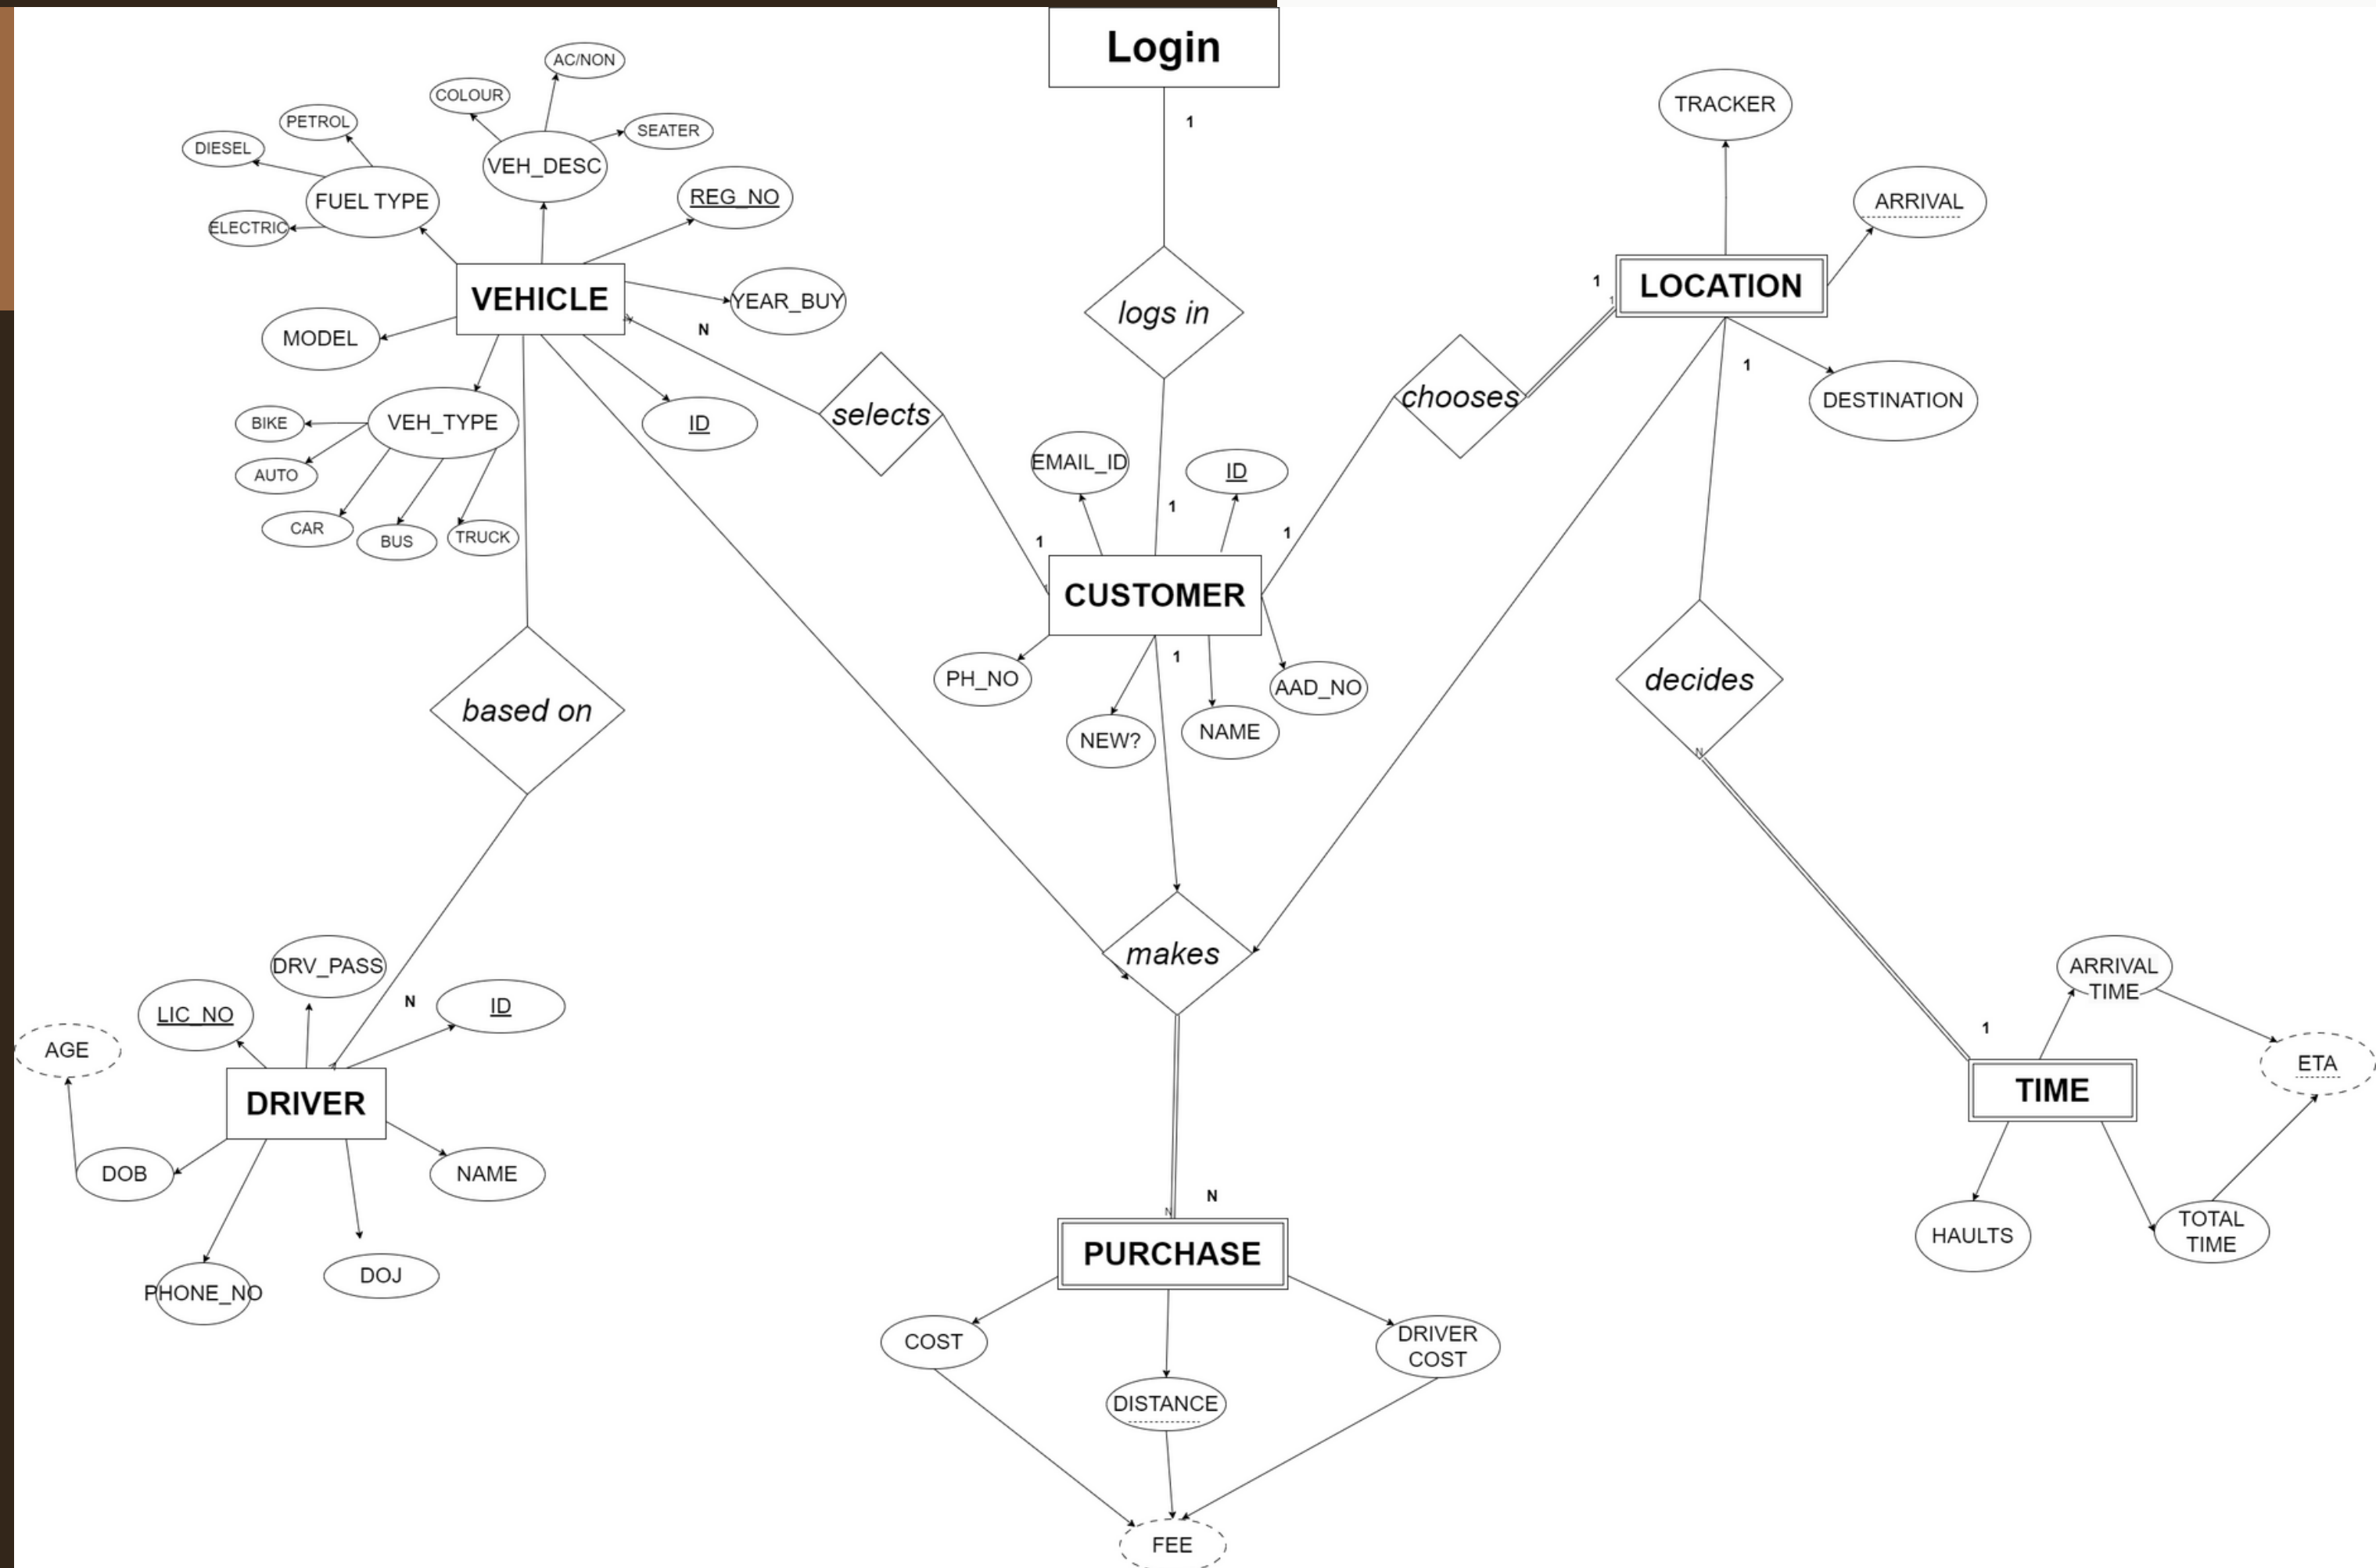

## MISSION & VISION

Our creative concept is to create a vehicle management system that gives consumers an easy-to-use and affordable platform to reserve cars and drivers by providing information about arrival, mode of transport, and destination. A database management system that can store, retrieve, and manage the necessary data is essential to our project.

Our project also aims to:

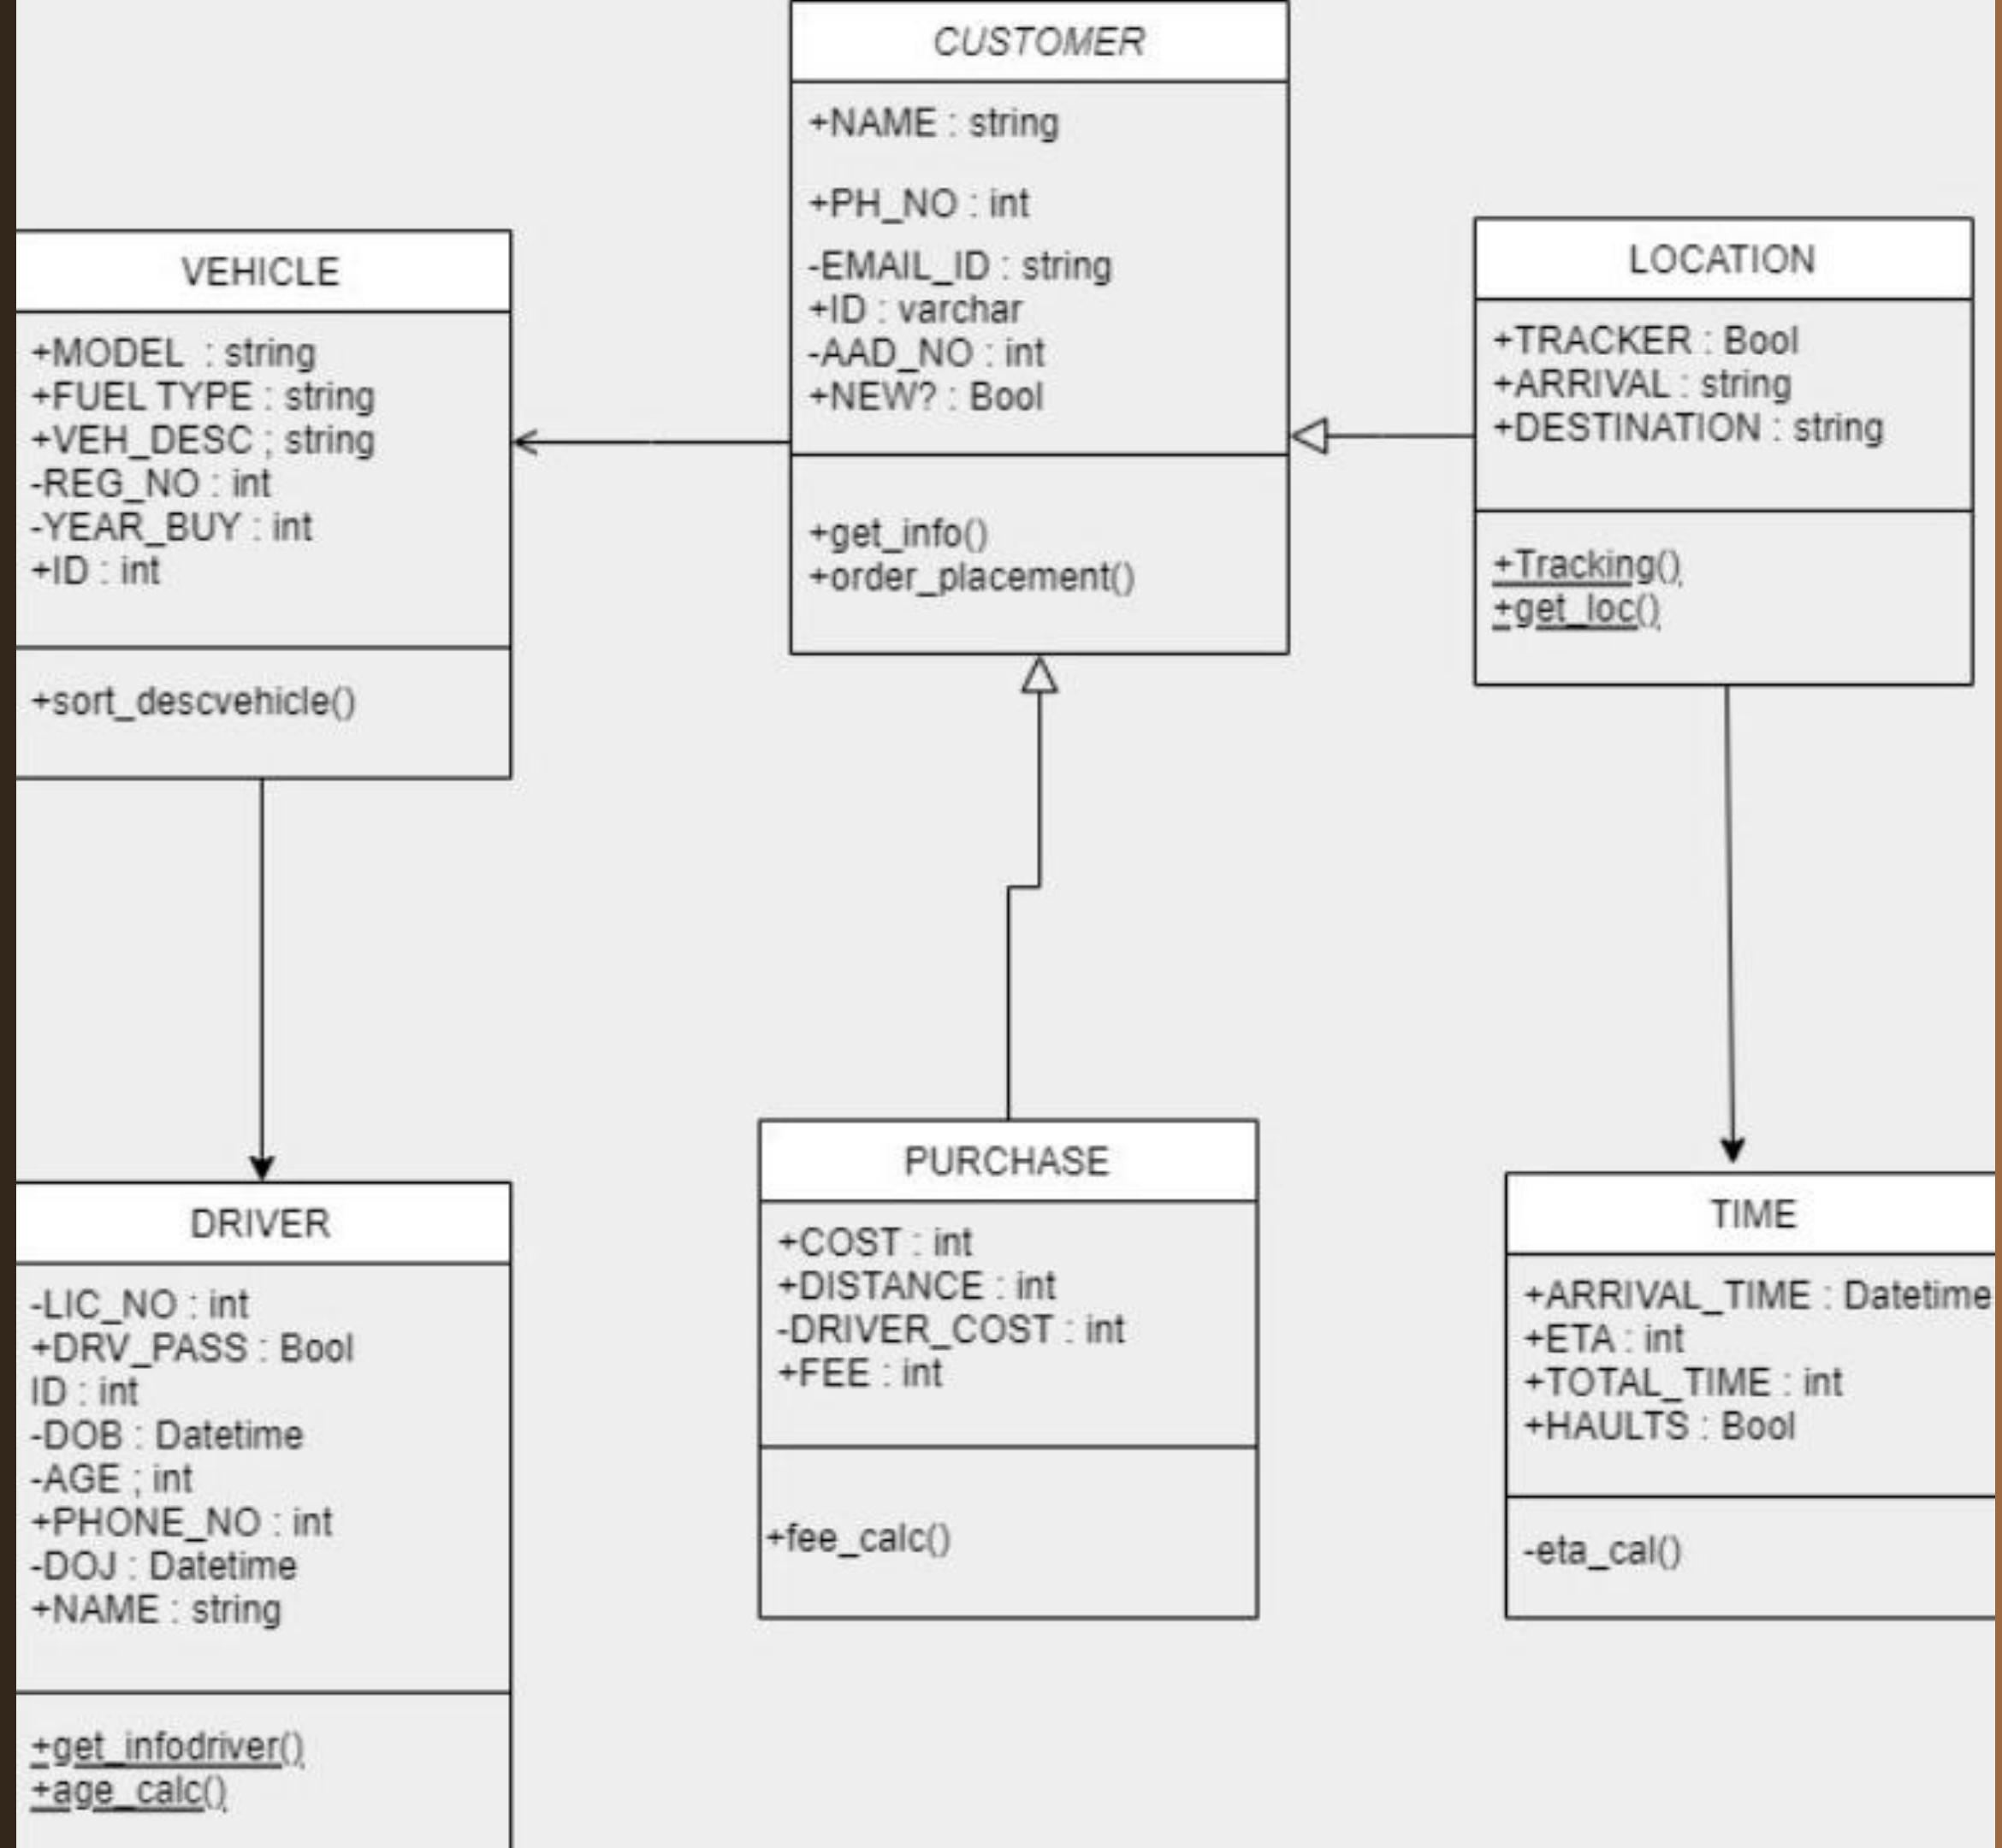

1. ensure driver safety
2. produce accurate ETA's
3. Customer satisfaction
